Name:	Access user profile and manage phone plan through phone service provider app
Summary:	The phone service provider app allows a user to access her profile, check all the phone plan options, and manage phone credits and services.
Version:	1.0
Preconditions:	1. User activated an account through the service provider website
Triggers:	Tap the app and login
Main Success Scenario:	1. User performs a login by providing the same username and password set during the registration on the web 2. Credentials are successfully validated and the app displays the homepage user profile, with a summary of the phone plan and other buttons (actions) 3. User tap the button to check the phone credits 4. App displays the credits and the user thresholds together with a button to add more credit 5. User goes back to the homepage and tap the link to manage phone options (services) 6. App displays a new screen with options already enabled and options that can be enabled 7. User taps the LTE (G4) option to request activation 8. App verifies the phone credits and enables the chosen service 9. User is now happy to navigate Internet with LTE!
Alternative Success Scenarios:	1. User forgot the password and tap the "recover password" button at the bottom of the login screen 2. App generates a temporary password and send it in a text to the user smartphone 3. User provides the username and the temporary password in the login screen 4. Credentials are validated and homepage user profile is displayed

Postconditions:	1. Once logged in, user can manage her credentials, credits and/or phone services

Business Rules:	1. At the time of the registration via web, user has to:
	    a. Provide valid ID's information
	    b. Provide a valid home address
	    c. Provide a valid credit/debit card information
	    d. uploading a scan of a valid user ID
	    e. set a valid username and password
	2. Registration is complete after the service provider has reviewed all the information and documents
	3. User can successfully login by using the app only after registration is complete

Notes:	1. App is supported from a specific Android version on
